Aneesh Patil

Full-Stack Software Engineer | React · TypeScript · Node.js · Python · AWS

Yokohama, Japan | hello@anee5h.com | anee5h.com | github.com/anee5h | linkedin.com/in/anee5h

SUMMARY

Full-stack software engineer with 5+ years in IT and 4+ years building web applications. At Eclect, I build Zendesk business applications from customer requirements through maintenance. My work includes React/TypeScript front ends, Node.js and Python integrations, AWS Lambda services, and data migrations. I previously led a six-person systems-integration project. I work in English and Japanese (JLPT N2).

KEY ACHIEVEMENTS

- Delivered 12+ new applications and 20+ enhancements while handling up to five client projects at once.
- Resolved two issues that had stalled client projects: a production API problem (2 weeks) and undocumented API write failures (9 days).
- Migrated 10,856 records with a staged, verifiable Python pipeline: zero missing records, zero permanent failures.

SKILLS

Primary work technologies: TypeScript, React, JavaScript, Node.js, Python, Vite, REST API integration, AWS Lambda and API Gateway, Zendesk (ZAF SDK, Zendesk Garden), Playwright, Vitest, Git/GitLab
Additional work technologies: PHP, MySQL, jQuery, SQL, PostgreSQL, DynamoDB, AWS SAM, AWS CDK, CloudWatch, SQS, EventBridge, SSM Parameter Store, Secrets Manager, IAM, Amazon Bedrock, pytest, Jest, Autify, Docker, Figma, Claude Code and Codex (development support)
Personal project technologies: Next.js, Tailwind CSS, Supabase, Cloudflare (Workers, Pages, D1, R2), Astro, GitHub Actions, Leaflet, i18next
Languages: Japanese: business level, used daily at work (JLPT N2, Jan 2024); English: fluent; Marathi, Hindi: native

EXPERIENCE

Eclect Co., Ltd. | Software Engineer (Full-Stack) — Jun 2024 – Present

170 employees · CX platform implementation, web development, API integration and data migration. Projects use three-person teams comprising a PM, a consultant, and me. I work from requirements and technical design through release and maintenance.

Customer-service app suite (4 apps) for a cosmetics manufacturer — May 2025 – Sep 2026

- Built four Zendesk apps that bring customer, order, subscription and loyalty-point data into the support agent's screen, removing manual look-ups across systems; one is a React + Vite app that reads from the client's e-commerce REST API.
- Designed the API adapter layer, ticket-field read/write module and UI; found the root cause of a production API issue that had stalled the project for two weeks.
- Introduced Playwright to the team and covered the apps with 64 end-to-end and 179 Vitest unit tests; caught 5 functional defects before delivery.

Tech: TypeScript, React, Vite, Node.js, Zendesk Apps Framework, REST API, Playwright, Vitest

Order-management integration app for a mail-order retailer — Jun 2026 – Sep 2026

- Integrated an external order-management REST API with write-back to Zendesk custom fields and edit-screen actions; the app is in production.
- Tested undocumented API behaviour to fix a write failure that had blocked the team for 9 days, and a save action that silently did nothing.

Tech: TypeScript, React, Zendesk Apps Framework, REST API, Playwright

Ticket migration pipeline for a major electric utility — May 2026 – Aug 2026

- Designed a staged Python pipeline (export, transform, import, verify, delete) with exponential-backoff retry, concurrent jobs and a verification check after each stage.
- Migrated 10,856 tickets; ID matching confirmed zero missing or extra records, and originals were soft-deleted with a 25-job pool after a 500-ticket canary run.

Tech: Python, httpx, tenacity, pydantic, structlog, pytest, Zendesk Ticket Import API

Translation app rework and AWS Lambda runtime upgrade — Feb 2026 – Mar 2026

- Upgraded 7 Lambda functions from Python 3.10 to 3.14, updating development and production SAM templates and fixing asyncio event-loop usage; released through reviewed merge requests with no production incidents.
- Moved DeepL API authentication to HTTP headers and added a switch for the free API tier.

Tech: Python, AWS Lambda, API Gateway, AWS SAM/CloudFormation, DeepL API

Generative AI applications (2) — Aug 2024 – Mar 2025

- RAG app (Feb 2025 – Mar 2025): developed the React/TypeScript front end and API integration for a generative AI application. A partner company built the RAG server.

- Chat summarizer (Aug 2024 – Sep 2024): summarized long customer chat histories for customer-service agents with a model on Amazon Bedrock. Built comment retrieval and preprocessing, including personal-data masking, the Bedrock API integration, and the Zendesk summary UI.
  Tech: React, TypeScript, JavaScript, Zendesk Apps Framework, Amazon Bedrock, REST API

Other work: Help Center API extraction, Custom Objects API v2 migration, Zendesk Marketplace releases, EN/JA localization.

Backend work (team): Maintained and fixed the API Gateway and Lambda backends of existing Zendesk apps, and handled production incidents with CloudWatch. Areas: route design, JWT authentication, signed webhooks, ZIS, Secrets Manager/IAM, OAuth migration, SQS, EventBridge and retry for rate limits (429).

Seaparts Co., Ltd. | Systems Engineer — Apr 2022 – May 2024

72 employees · Automotive recycled-parts sales; in-house business systems and online auctions.

System data integration (Project lead, team of 6 including me) — Oct 2023 – May 2024

- Led a project connecting independent business systems to remove duplicate data entry and improve inventory management; owned estimates and architecture diagrams, and confirmed requirements with business teams.
- Designed functions, screens and the inventory database files; managed the development schedule, progress, and quality, reporting to the department head.
- Split the work into tasks, assigned them to team members, mentored a junior engineer and delivered on schedule.
  Tech: PHP, JavaScript, jQuery, MySQL, Apache, AWS

E2E test automation (Member, team of 6) — Aug 2023 – Oct 2023

- Introduced Autify: mapped business workflows into test scenarios and streamlined the test procedure.
- Ran the automated tests and reviewed results with the team.
  Tech: Autify, JavaScript

PHP 5 to 8 upgrade of a business web application (Member, team of 4) — Nov 2022 – Aug 2023

- Investigated and fixed incompatibilities in the existing codebase to run on PHP 8.
- Carried out unit, integration and regression testing before release.
  Tech: PHP, JavaScript, jQuery, MySQL, Apache

Responsive UI renewal (~150 screens) (Member, team of 3) — Aug 2022 – Oct 2022

- Wrote screen specifications and designed the new UI in Figma.
- Implemented the responsive front end in HTML, CSS, JavaScript, and jQuery. This made the system easier to use on smartphones for 10–15 client companies and about 500–1,000 users.
  Tech: HTML, CSS, JavaScript, jQuery, Figma

Amazon Development Centre (India) Private Limited | Associate, Digital Process JP — May 2021 – Apr 2022

India · data analysis and process improvement for the Japanese Kindle business (35-person program)

Kindle eBooks business support for Amazon.co.jp (Member, team of 8) — Jun 2021 – Mar 2022

- Analysed pricing and business data with SQL, Excel and Python to support business decisions.
- Built operational reports, automated tasks with VBA and Python, and maintained SOPs with stakeholders in Japan.
  Tech: SQL, PostgreSQL, Python, VBA, Excel

PROJECTS

Meguruto: Japan travel recommendation and itinerary app (solo) — Ongoing

meguruto.app | github.com/anee5h/trip-planner

- Recommends destinations from origin, time, transport, budget, season and interests, then builds a day plan; English and Japanese; 1,130-destination catalogue with automated integrity checks.
- Quality gates in GitHub Actions: Vitest unit tests focused on the recommendation, transport and cost logic, Playwright end-to-end tests, axe accessibility checks and translation-key parity checks. Built Supabase auth and a Cloudflare Pages Functions API that has rate limiting and keeps the API key on the server.
  Tech: React 19, TypeScript, React Router 7, Vite, Tailwind CSS 4, Supabase, Cloudflare Pages Functions, Vitest, Playwright

EDUCATION

Master of Technology (M.Tech), Manufacturing Engineering — 2017 – 2019
National Institute of Technology Karnataka (NITK), India

Bachelor of Engineering (B.E.), Mechanical Engineering — 2012 – 2016
Shivaji University, India

Two peer-reviewed papers (Springer 2025, second author; Elsevier 2020, first author). After my master's degree, I studied Japanese for one year to prepare for work in Japan. COVID-19 delayed my move until 2022.
