Aneesh Patil

Full-Stack Software Engineer | React · TypeScript · Node.js · Python · AWS

Yokohama, Japan | hello@anee5h.com | anee5h.com | github.com/anee5h | linkedin.com/in/anee5h

SUMMARY

Full-stack software engineer with 5+ years in IT and 4+ years building web applications. At Eclect I build business applications on the Zendesk platform end to end (React/TypeScript front ends, Node.js and Python API integrations, AWS Lambda services and data migrations), from customer requirements to release and maintenance. Previously led a six-person system-integration project. Fluent English; business-level Japanese (JLPT N2).

KEY ACHIEVEMENTS

- Delivered 12+ new applications and 20+ enhancements end to end, running up to five client projects in parallel.
- Resolved two issues that had stalled client projects: a production API problem (2 weeks) and undocumented API write failures (9 days).
- Migrated 10,856 records with a staged, verifiable Python pipeline: zero missing records, zero permanent failures.

SKILLS

Front end: React, TypeScript, JavaScript, Next.js, React Router, Vite, Tailwind CSS, HTML/CSS, Zendesk Garden, jQuery

Back end & APIs: Node.js, Python (httpx, pydantic, tenacity), PHP, REST API integration and adapter design, retry/backoff, concurrent job pools

Cloud & data: AWS (Lambda, API Gateway, SAM/CloudFormation, CloudWatch, S3, IAM, DynamoDB, Bedrock), Cloudflare (Workers, Pages, D1, R2), Supabase, PostgreSQL, MySQL

Testing & CI/CD: Playwright, Vitest, Jest, pytest, Postman/Newman, GitLab CI, GitHub Actions, Docker, Git/GitLab code review

AI: Amazon Bedrock and RAG API integration; AI-assisted development with Claude Code and Codex, with output verified by tests and review

Languages: Japanese: business level, used daily at work (JLPT N2, Jan 2024); English: fluent; Marathi, Hindi: native

EXPERIENCE

Eclect Co., Ltd. | Software Engineer (Full-Stack) — Jun 2024 – Present

Osaka (hybrid, ~1 year), then Yokohama (remote) · 170 employees · CX platform implementation, web development, API integration and data migration. Each project run by a team of 3 (PM, consultant and me), from requirements and technical design to release and maintenance; 12+ new apps and 20+ enhancements.

Customer-service app suite (4 apps) for a cosmetics manufacturer — May 2025 – Sep 2026

- Built four Zendesk apps that bring customer, order, subscription and loyalty-point data into the support agent's screen, removing manual look-ups across systems; one is a React + Vite app that reads from the client's e-commerce REST API.
- Designed the API adapter layer, ticket-field read/write module and UI; found the root cause of a production API issue that had stalled the project for two weeks.
- Introduced Playwright to the team and covered the apps with 64 end-to-end and 179 Vitest unit tests; caught 5 functional defects before delivery.

Tech: TypeScript, React, Vite, Node.js, Zendesk Apps Framework, REST API, Playwright, Vitest

Order-management integration app for a mail-order retailer — Jun 2026 – Sep 2026

- Integrated an external order-management REST API with write-back to Zendesk custom fields and edit-screen actions.
- Tested undocumented API behaviour to fix a write failure that had blocked the team for 9 days, and a save action that silently did nothing.

Tech: TypeScript, React, Zendesk Apps Framework, REST API, Playwright

Ticket migration pipeline for a major electric utility — May 2026 – Aug 2026

- Designed a staged Python pipeline (export, transform, import, verify, delete) with exponential-backoff retry, concurrent jobs and a verification check after each stage.
- Migrated 10,856 tickets; ID matching confirmed zero missing or extra records, and originals were soft-deleted with a 25-job pool after a 500-ticket canary run.

Tech: Python, httpx, tenacity, pydantic, structlog, pytest, Zendesk Ticket Import API

Translation app rework and AWS Lambda runtime upgrade — Feb 2026 – Mar 2026

- Upgraded 7 Lambda functions from Python 3.10 to 3.14, updating dev and prod SAM templates and fixing asyncio event-loop usage; released through reviewed merge requests with no production incidents.
- Moved DeepL API authentication to HTTP headers and added a switch for the free API tier.

Tech: Python, AWS Lambda, API Gateway, AWS SAM/CloudFormation, DeepL API

Generative-AI applications (2) Aug 2024 – Mar 2025

- RAG app (Feb 2025 – Mar 2025): built the React/TypeScript front end of a generative-AI app connected to a RAG server over the client's internal data, including API integration and response display.
- Chat summarizer (Aug 2024 – Sep 2024): summarized long customer chat histories with a model on Amazon Bedrock; built retrieval and pre-processing, the Bedrock API call and the in-Zendesk summary UI.

Tech: React, TypeScript, JavaScript, Zendesk Apps Framework, Amazon Bedrock, REST API

Other work: Help Center API extraction, Custom Objects API v2 migration, Zendesk Marketplace releases, EN/JA localization, Google Apps Script internal tool.

Seaparts Co., Ltd. | Systems Engineer — Apr 2022 – May 2024

Chiba and Yamaguchi (~1 year each) · 72 employees · Automotive recycled-parts sales; in-house business systems and online auctions.

System data integration (Project lead, team of 6) Oct 2023 – May 2024

- Led a project connecting independent business systems to remove duplicate data entry and improve inventory management; owned estimates and architecture diagrams, and confirmed requirements with business teams.
- Designed functions, screens and the inventory database files; managed programming schedule, progress and quality, reporting to the department head.

Tech: PHP, JavaScript, jQuery, MySQL, Apache, AWS

E2E test automation (Member, team of 6) Aug 2023 – Oct 2023

- Introduced Autify: mapped business workflows into test scenarios and streamlined the test procedure.
- Ran the automated tests and reviewed results with the team.

Tech: Autify, JavaScript

PHP 5 to 8 upgrade of a business web application (Member, team of 4) Nov 2022 – Aug 2023

- Investigated and fixed incompatibilities in the existing code base to run on PHP 8.
- Carried out unit, integration and regression testing before release.

Tech: PHP, JavaScript, jQuery, MySQL, Apache

Responsive UI renewal (~150 screens) (Member, team of 3) Aug 2022 – Oct 2022

- Wrote screen specifications and designed the new UI in Figma.
- Implemented the responsive front end in HTML, CSS, JavaScript and jQuery.

Tech: HTML, CSS, JavaScript, jQuery, Figma

Amazon Development Centre (India) | Associate, Digital Process JP — May 2021 – Apr 2022

Chennai, India (remote) · data analysis and process improvement for the Japanese Kindle business (35-person program)

Kindle eBooks business support for Amazon.co.jp (Member, team of 8) Jun 2021 – Mar 2022

- Analysed pricing and business data with SQL, Excel and Python to support decisions for the Japanese Kindle business.
- Built operational reports, automated tasks with VBA and Python, and maintained SOPs with stakeholders in Japan.

Tech: SQL, PostgreSQL, Python, VBA, Excel

PROJECTS

Meguruto: Japan travel recommendation and itinerary app (solo) Ongoing

meguruto.app | github.com/anee5h/trip-planner

- Recommends destinations from origin, time, transport, budget, season and interests, then builds a day plan; English and Japanese; 1,130-destination catalogue with automated integrity checks.
- Quality gates in GitHub Actions: 5,319 Vitest tests, 34 Playwright specs, axe accessibility checks and 853 translation keys checked for parity; Supabase auth and Cloudflare Pages Functions API with rate limiting and a server-held key.

Tech: React 19, TypeScript, React Router 7, Vite, Tailwind CSS 4, Supabase, Cloudflare Pages Functions, Vitest, Playwright

EDUCATION

Master of Technology (M.Tech), Manufacturing Engineering 2017 – 2019
National Institute of Technology Karnataka (NITK), India

Bachelor of Engineering (B.E.), Mechanical Engineering 2012 – 2016
Shivaji University, India

Two peer-reviewed papers (Springer 2025, second author; Elsevier 2020, first author). After graduating I trained in Japanese for a year; COVID-19 delayed my move, so I worked at Amazon India until relocating in 2022.
